How to choose a garment steamer.

Consider your needs. Will you use the steamer occasionally or every day?
Will you steam briefly or for long periods – many times a day or for a long stretch?
Do you want a robust model that needs less maintenance?

We have handheld steamers for light use, floor models that are great for many small tasks and large steamers with a heated water tank for big jobs.
See the specifications for each steamer and feel free to ask if in doubt.

Important!

To enjoy your steamer for many years, it must be maintained by descaling.

All our steamers can be descaled with white vinegar or a standard descaler from the supermarket.

Remember to rinse the steamer with clean water several times and empty out all limescale residue.

You can find descaling guides and tips under FAQ – garment steamer at www.supersellers.eu on the SuperSellerS YouTube channel.

How to descale a steamer – 4 easy steps

1.

Empty the machine of water.

If the steamer has a scale collector, empty it too.

2.

Mix a standard household descaler or white vinegar in the ratio recommended.

Pour the mixture into the steamer.

3.

Switch on the machine and let it steam for 5 min.

Switch off and leave the mixture overnight.

4.

IMPORTANT!

Empty the machine and container completely and rinse with clean water at least twice.

You will see small pieces of limescale when rinsing.

If the machine has a bottom plug, remove it for better rinsing.

The steamer is now ready to use again.

If in doubt whether rinsing was thorough enough, test by steaming a towel or tea towel first.

Note!

You can use tap water in all our steamers

Download the steamer descaling guide at www.supersellers.eu

Which steamer should I choose?

It depends very much on your needs. If you regularly steam large quantities of clothes we recommend one of our large models, while a smaller size is ideal for lighter use. The size of the water tank also matters. For longer steaming sessions a large tank is preferable, as it does not need constant refilling.

Handheld steamers are ideal for travel, exhibitions and fashion shows, or when only a few garments need steaming or freshening up.

SuperSellerS offers a wide range of steamers, from affordable handheld models to large professional units.

A steamer is a must in every clothing or second-hand shop.

A steamer is not a cleaning device, but because the fabric is treated with steam most odours disappear – the hot steam kills dust mites and removes most unpleasant smells.

How does a steamer work?

A steamer works differently from an iron. It removes creases and wrinkles without pressing the fabric, e.g. while clothes hang on hangers. The steamer heats water until it turns to steam. The hot steam restores the fibres so they straighten out without damaging the garment. This makes a steamer especially suitable for delicate materials such as silk and satin. A garment steamer also kills bacteria and removes odours.

How do you steam clothes?

A steamer is easy to use. Switch it on and within a few minutes it is ready. Hang the garment on a hanger and start steaming from the bottom to make full use of the rising steam. Press the steamer head against the garment and keep the fabric taut for the best result. Collars are best steamed lying flat on a level surface. For thicker materials such as wool coats and fitting-room curtains, use the accessory brush.

Had an accident and need a spare part for your steamer?

We stock a range of spare parts for our steamers, including extra water tanks, complete hoses, steamer heads and much more.
